

Storytelling with Data

From showing numbers to moving people

Areena Arora · Editorial Coder, The Hindu

Q3 Chargeback Analysis

Payments Ops · Internal · v3 FINAL (2)

- Data source: disputes system export, Jul 1 to Sep 30, 2026; excludes test accounts and reversed disputes; reason codes mapped per network guidelines v4.2; USD at transaction-date FX
- Q3 total chargebacks 1,656 vs 1,200 in Q2 (QoQ +38.00%); avg dispute value \$287.40; blended win rate 33.12%; see tabs 4 to 9

Reason code	Jul	Aug	Sep	Q3	QoQ %	Share %
10.4 Fraud CNP	118	122	120	360	12.50%	21.74%
13.3 NAD	110	118	117	345	15.00%	20.83%
13.1 INR (other)	85	92	93	270	22.73%	16.30%
13.1 INR (>\$250, NSR)	120	170	190	480	166.67%	28.99%
12.6 Duplicate	36	37	37	110	10.00%	6.64%
Misc.	29	31	31	91	13.75%	5.50%
Total	498	570	588	1,656	38.00%	100.00%

Every number was there. The story wasn't.

Today: from showing data to communicating with it.

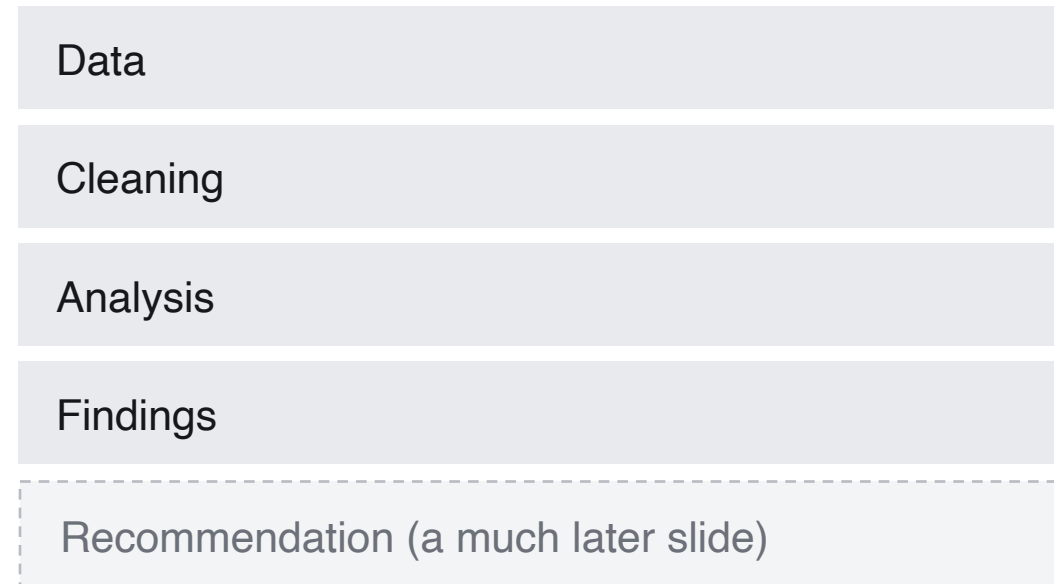

What changed?

So what?

Now what?

We present in the order we worked

How we work

How they listen

For today, let's imagine we're working with chargeback data

Chargeback is a reversal of a credit or debit transaction initiated by the cardholder's bank on customer's request to return funds to the customer.

SO WHAT?

Keep asking until there is no more “*so what*” possible

so what?

Signatures could halve it

so what?

Costs more than all the rest

so what?

'Not received' grew fastest

so what?

Split by reason and order value

We pulled 18 months of data

Method earns its place when someone asks

One line up front

Enough for credibility

The rest: appendix

Ready when asked

Unless it changes the answer

Then say it first

Write the email subject line first.

How to spot what's the message in the data?

1

Is it real?

Signal or noise

Small numbers

Regression to the mean

2

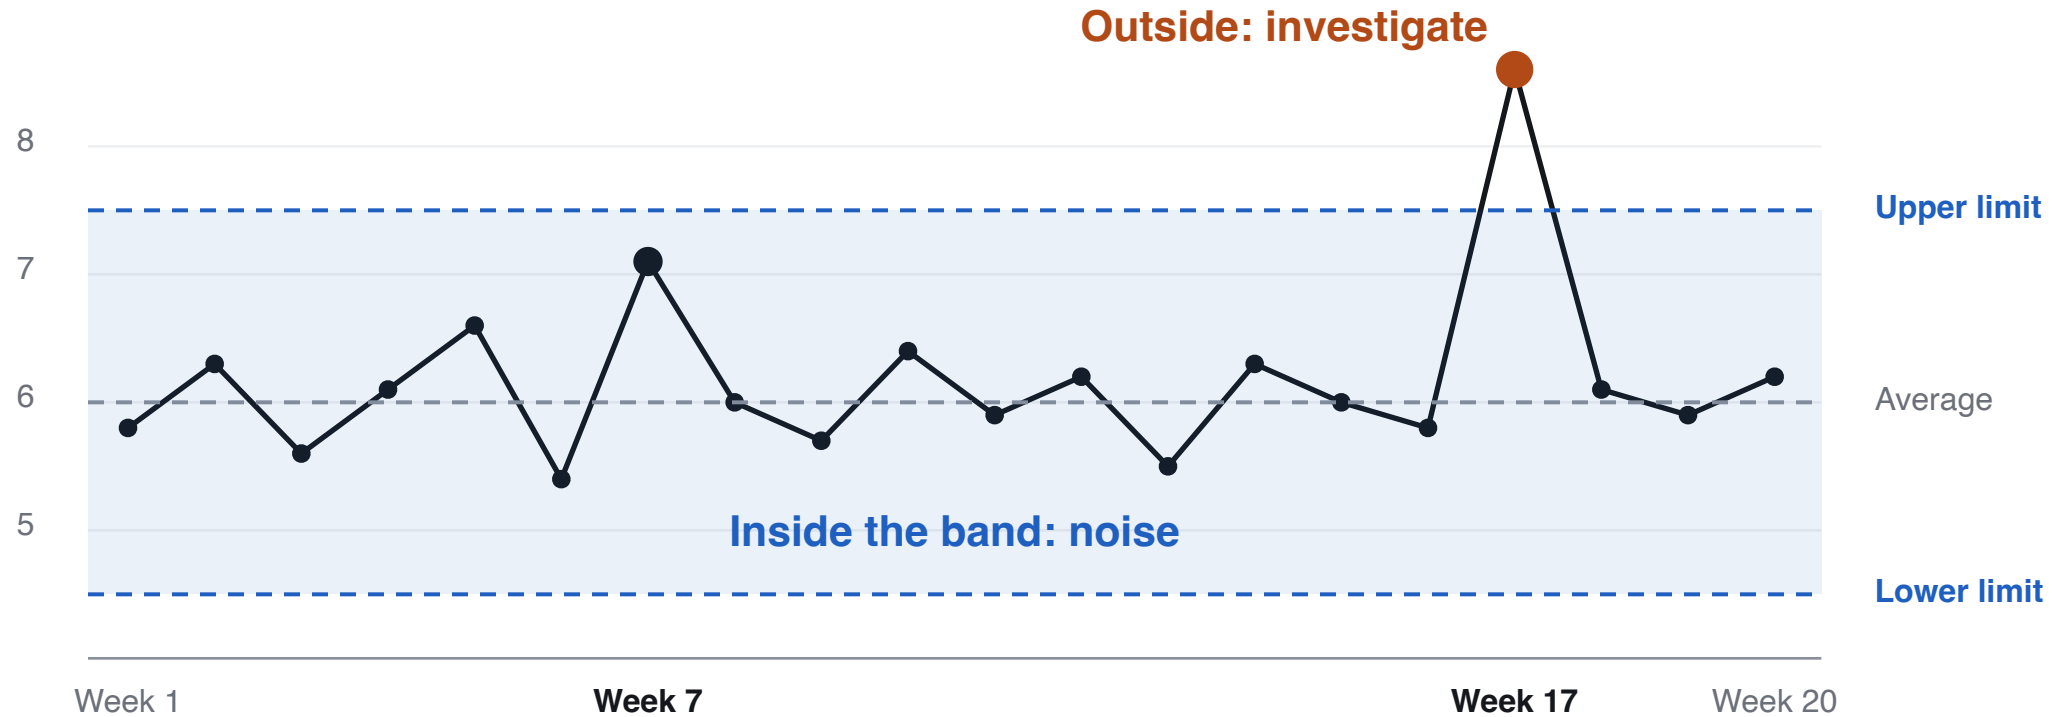

What's driving it?

Rate or volume

Contribution

Mix shift

Which week would you escalate?

Win rate fell from 52% to 33%. Retrain the disputes team?

Dispute type	Q2 disputes	Q2 win rate	Q3 disputes	Q3 win rate
Fraud claims (hard to win)	200	20%	800	25%
Item not received (easier)	800	60%	200	65%
All disputes	1,000	52%	1,000	33%

Better at both types. The mix flipped: four times as many fraud claims.

Write your main point in one sentence

Does it change a decision?

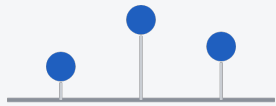

Is it big enough to matter?

Is it new to this room?

INTERESTING IS NOT THE SAME AS IMPORTANT

[What] [rose or fell] by [how much] [compared with what], driven by [rate, volume or mix] in [which segment].

The eye reads position best, colour worst

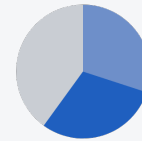

Position

Aligned scales

Length

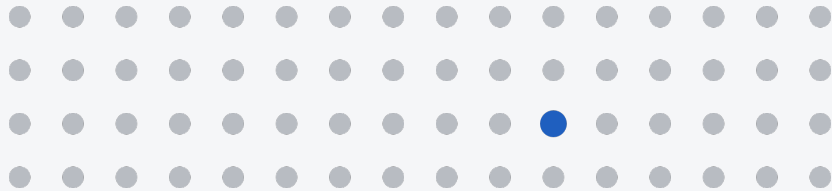

Angle

Area

You found the blue dot before you read this.

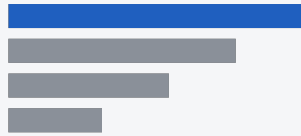

CHOOSING THE RIGHT CHART

Start from the question

Over time?

Line

Which is biggest?

Sorted bar

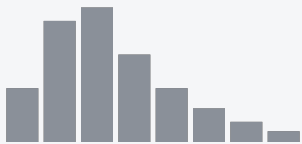

What shifted?

Dumbbell or slope

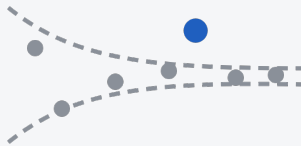

How did A become B?

Waterfall

What's typical?

Histogram

A real outlier?

Funnel plot

Related?

Scatter

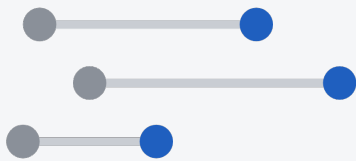

1,656

Just one number?

No chart. Big number.

Which chart?

1

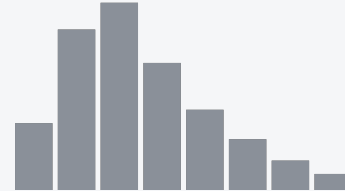

Dumbbell

2

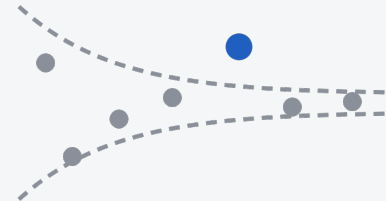

Waterfall

3

Histogram

4

Funnel plot

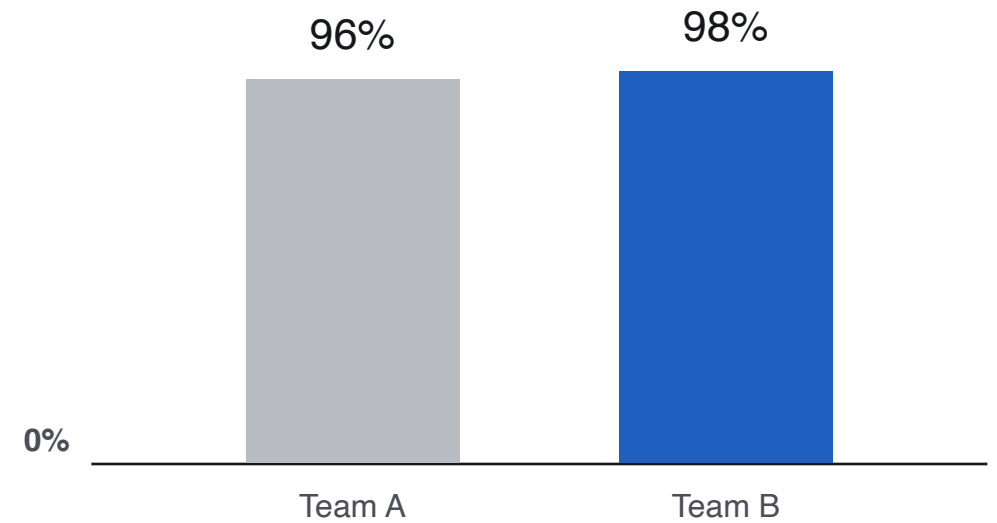

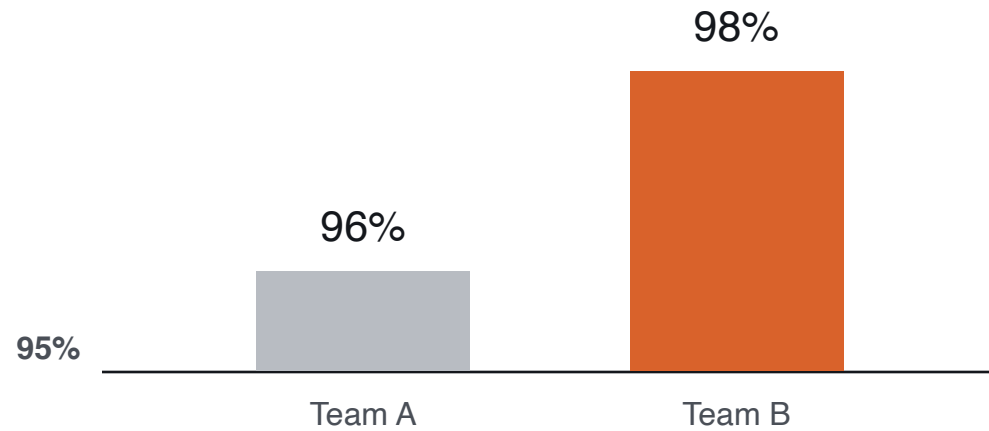

A Before vs after, 8 reason codes

C Typical time, if some take a week?

B \$1.2M → \$1.5M: what made the gap?

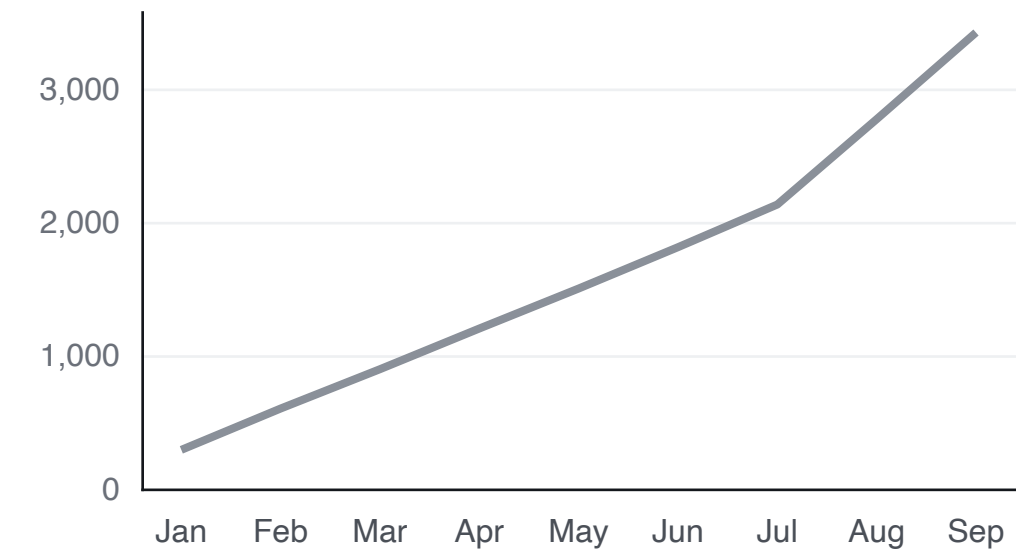

D Which of 40 groups is truly unusual?

The stretched gap

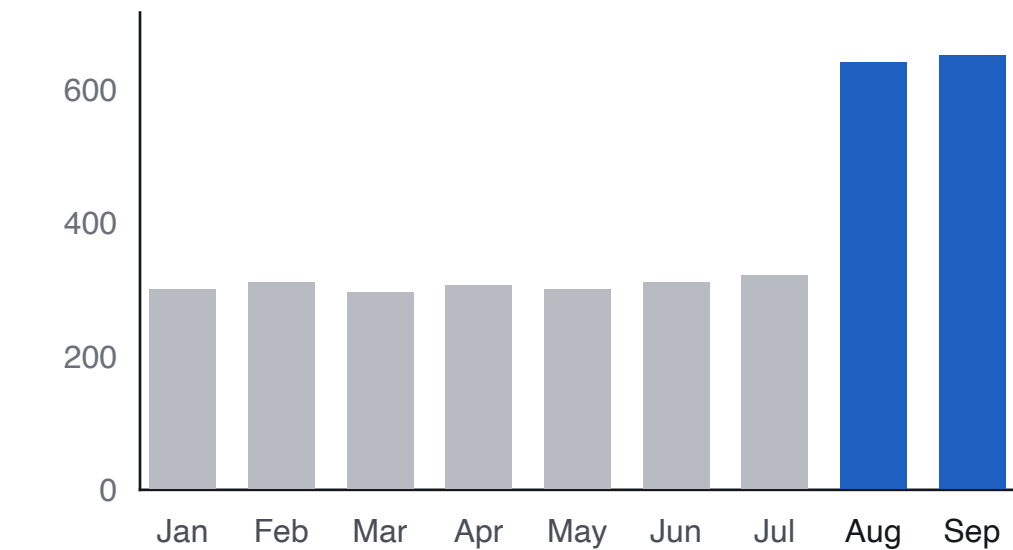

The cumulative trap

Year to date growth

Total chargebacks since January

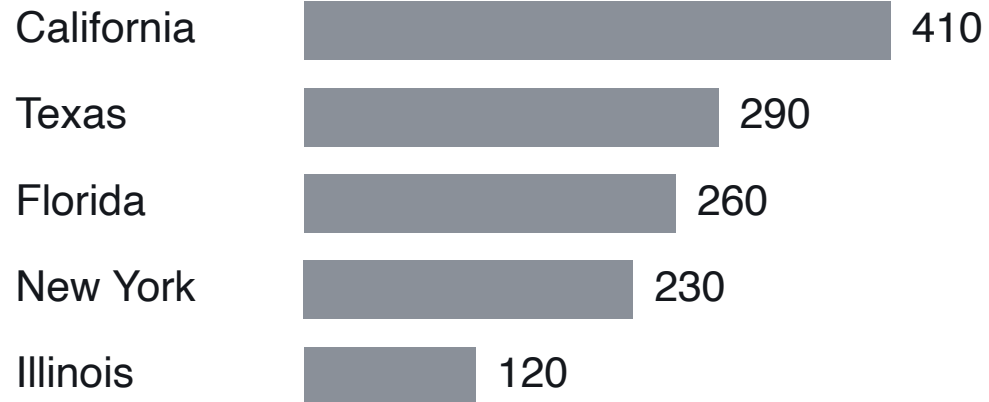

Monthly: it doubled in August

Chargebacks added each month

Every map of totals is a population map

Chargebacks by state (count)

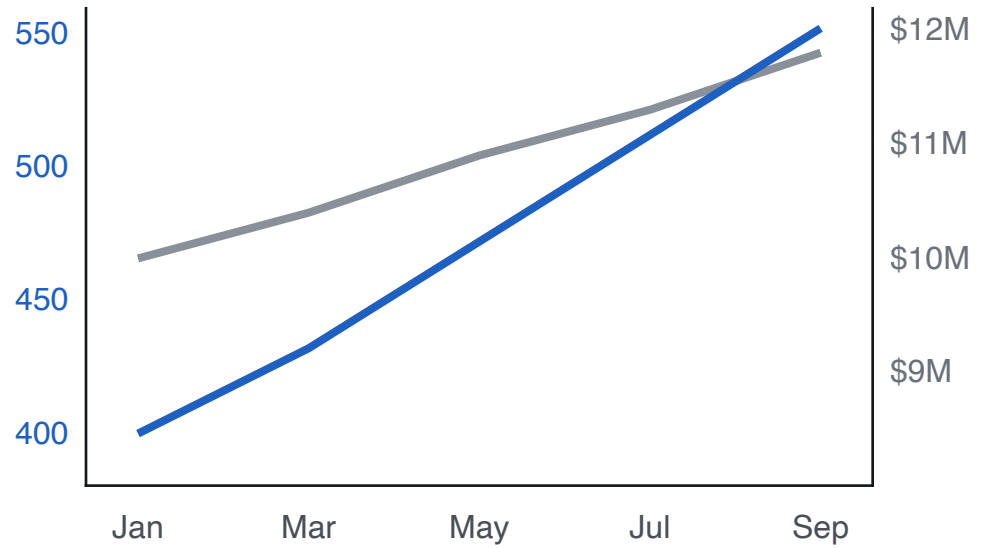

Per 1,000 orders

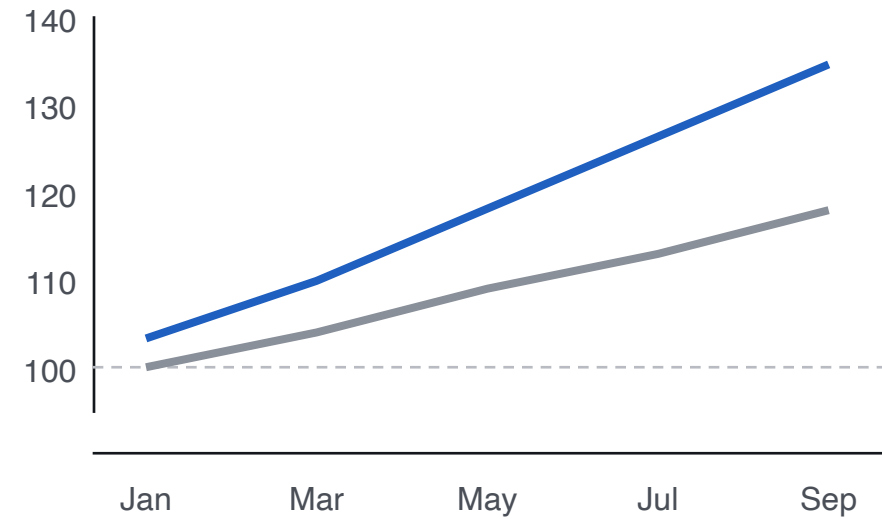

The dual axis: the crossing means nothing

Chargebacks

Index (Jan = 100)

Q3 Chargeback Analysis

Payments Ops · Internal · v3 FINAL (2)

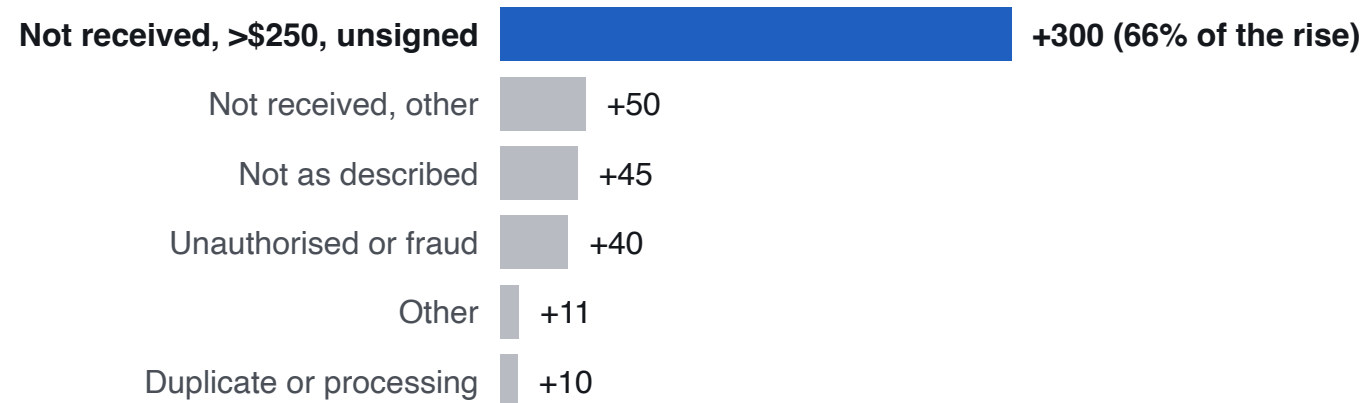

- Data source: disputes system export, Jul 1 to Sep 30, 2026; excludes test accounts and reversed disputes; reason codes mapped per network guidelines v4.2; USD at transaction-date FX
- Q3 total chargebacks 1,656 vs 1,200 in Q2 (QoQ +38.00%); avg dispute value \$287.40; blended win rate 33.12%; see tabs 4 to 9

Reason code	Jul	Aug	Sep	Q3	QoQ %	Share %
10.4 Fraud CNP	118	122	120	360	12.50%	21.74%
13.3 NAD	110	118	117	345	15.00%	20.83%
13.1 INR (other)	85	92	93	270	22.73%	16.30%
13.1 INR (>\$250, NSR)	120	170	190	480	166.67%	28.99%
12.6 Duplicate	36	37	37	110	10.00%	6.64%
Misc.	29	31	31	91	13.75%	5.50%
Total	498	570	588	1,656	38.00%	100.00%

Chargebacks rose 38% in Q3.

Two-thirds of the rise came from one fixable gap.

Increase in chargebacks by reason, Q2 to Q3 (count)

SO WHAT

≈ \$96,000 a quarter in extra losses, still rising in September.

NOW WHAT

Approve a six-week signature pilot on orders over \$250.
Decision today.

Find the story

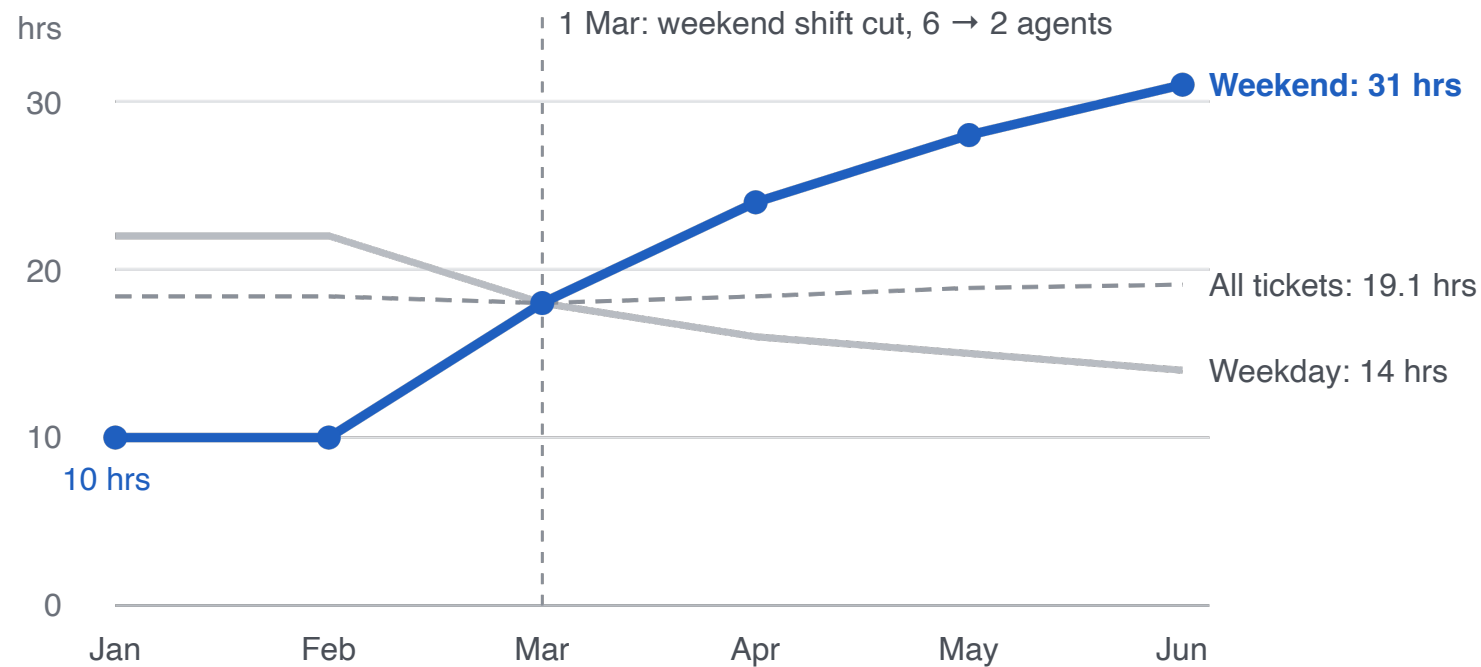

1 Headline: one sentence, with a number

2 Chart: type, axes, what to highlight

3 Ask: Make a recommendation - who does what, by when

Month	Tickets	Avg resolution time (hrs)	Weekday avg resolution time (hrs)	Weekend avg resolution time (hrs)	Weekend share	First-contact resolution	Consumer satisfaction overall	Consumer satisfaction weekend
Jan	11,800	18.4	22	10	30%	62%	4.3	4.4
Feb	11,200	18.4	22	10	30%	61%	4.3	4.4
Mar	12,100	18.0	18	18	30%	63%	4.2	4.1
Apr	12,400	18.4	16	24	30%	62%	4.2	3.7
May	12,000	18.9	15	28	30%	62%	4.1	3.4
Jun	12,300	19.1	14	31	30%	63%	4.1	3.2

Weekend tickets now take 3x as long

WHAT

31 hours, up from 10

SO WHAT

1 in 3 customers waits over a day

NOW WHAT

Two agents back on weekends

TAKE THIS WITH YOU

What changed?
So what?
Now what?

Rewrite every slide title in your next deck as a sentence that says the point.

Questions?

Data doesn't speak for itself. You speak for it.
